PROFESSIONAL EXPERIENCE

GIS Technologist - Canada West Land, Calgary, AB *Dec 2025 - Present*

- Gave 100 colleagues across 5 roles instant answers from company data by building role-specific AI assistants on Microsoft Foundry, connected to internal APIs and tools; used daily in production.
- Built and deployed 3 internal APIs on Azure (Functions, App Service, API Management) serving hundreds of requests daily across 5 teams, shipped through Azure DevOps CI/CD.
- Cut selected full-day manual processes to 1–2 hours by helping build an AI workflow app with LangChain, LangGraph, and n8n.
- Cut QC time from 2 days to 1 hour on a six-map enterprise GIS workstream (up to 1M records) by automating Python and FME pipelines with AI-assisted methods now standard on the team.

Engineering Capstone Project Lead - University of Calgary, Calgary, AB *Sep 2024 - Apr 2025*

- Led capstone delivery and built the Python processing and validation pipeline comparing survey methods against photogrammetry-derived spatial datasets.

Shift Lead / Team Trainer - Gongcha *Nov 2020 - May 2024*

- Ran high-volume shift operations and trained new staff on standardized workflows.

EDUCATION

Bachelor of Science, Geomatics Engineering - University of Calgary, Calgary, AB *2020 - 2026*

PROJECTS

UBC Department of Psychology Research Platform *ubcpsych.com*

- Built solo as the official study platform for a UBC Psychology research lab; Yonsei University's Department of Psychology in Seoul now also runs an active study on it.
- Handles live participant intake and sessions in Canada and South Korea; 180+ participants so far, with automatic scoring that supports both labs' research and publications (Next.js, FastAPI, Supabase).

Glass Atlas: AI-Powered Personal Blog *glassatlas.dev*

- Personal blog where readers can ask questions in a chat and get answers drawn from my posts, with links back to the source.
- Built with SvelteKit and PostgreSQL; a RAG search layer finds posts by meaning as well as keywords so answers stay accurate.

PigeonCoop: Visual Workflow Builder for AI Coding Agents *github.com/AG9898/PigeonCoop*

- Desktop app for building, running, and replaying AI coding-agent workflows on a visual canvas, with human-review checkpoints.
- Built in Rust and React; every run is recorded so it can be replayed step by step.

Cloo: Terminal Workspace for AI Coding Agents *github.com/AG9898/cloo*

- Open-source Rust terminal app, similar to tmux, for running several AI coding agents side by side.
- Sessions keep running in the background after the window closes and can be picked up again later (pre-alpha).

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, SQL, Rust
- **AI & Agents:** LangChain, LangGraph, Microsoft Foundry, RAG & pgvector, MCP servers, OpenClaw / Hermes, Custom agent skills
- **Backend & Web:** FastAPI, Node.js, REST APIs, React, Next.js, SvelteKit, PostgreSQL, Redis
- **Cloud & DevOps:** Azure (App Service, Functions, API Management), Azure DevOps CI/CD, Docker, Vercel, Git
